EXAMINATION REFORMS

Examination Process and Evaluation

The COE issues the timetable for every semester, two weeks prior to the commencement of the Examinations. Nominal roll is prepared for the examination. After that COE appoints Question Paper (QP) setters with approval of Principal. The QP received from the setters are scrutinized in the COE office confidentially and forwarded for printing. On completion of the examinations, the process of the centralized evaluation of answer scripts starts immediately. After evaluation, the same is verified for its correctness. The results are published in the College website after obtaining approval from the Result Passing Board.

Processes integrating IT

The Examination Hall Tickets for eligible students are printed using COE portal software with their name, register number, recent photograph, details of the courses with codes, and date of the examination in chronological order of the candidate and distributed to the students through HODs. Following the completion of each subject's examination, a random number will be generated using the COE portal, and the COE will arrange for the numbers to be affixed to the answer booklets. After evaluation, the examiners shall enter the marks of each candidate in the portal, the same is verified for its correctness by the chief examiner and examiner.

Continuous Internal Assessment System

The Internal test dates are communicated to students through the academic calendar and circular. The subject handling faculty prepares two sets of question papers based on course outcomes and Bloom's taxonomical verbs, which are then verified by the HOD and forwarded to the COE for further processing. The COE chooses one Set of question paper for the Internal test exam. On completion of the examinations, the COE arranges for the centralized evaluation of test papers. After Evaluation, the internal test papers are distributed to the students. The final mark will be uploaded in the COE portal once the student has authorized his/her mark in the answer script.
